

Stock Control

OrderWise Stock Control

Fulfilling customer requirements accurately, efficiently and on time is high on the list of priorities for every company, with stock control at the very heart of how effectively this is achieved. OrderWise delivers the comprehensive stock control software today's businesses' need for complete end-to-end stock management.

Designed to perform

OrderWise uses the very latest software technology to control every item of stock your business holds. It doesn't matter what your stock is, how many items you hold or how many locations you are using - OrderWise will handle it for you. For each stock item, OrderWise will tell you:

- Current actual stock quantity
- Free stock quantity
- Sales allocated and unallocated quantity
- Closing stock quantity
- Supplier stock quantity on order
- Works order allocated quantity

Multiple currencies

OrderWise can help your business trade all over the world. With OrderWise, you are not restricted by currencies, you can set up as many different currencies as you need. The same item can be purchased from many different suppliers, in different countries, trading in different currencies. Likewise, it is easy to sell your items to customers across the world. Regardless of the currency used OrderWise will handle it effectively, with functionality also available for automated exchange rate updates.

Full audit trail

OrderWise records every single stock movement. This gives you an audit trail of every stock item, which supplier it has come from and to which customer it has been sent. This allows OrderWise to tell you the profitability of every order you ship. Stock can be assigned serial and batch numbers, allowing full end-to-end traceability from supplier to customer.

Complete stock visibility

OrderWise allows complete visibility of your stock holding, costing and prices. Fully integrated with all OrderWise modules, such as Sales, Purchasing, Despatch, CRM, Accounts, Manufacturing and more, OrderWise provides the full picture.

Barcode scanning technology

With the ability to perform a wide variety of warehouse tasks in a fast, accurate and efficient manner, our industry-leading Mobile Warehouse Management Devices allow users to truly harness the power of OrderWise in the palm of their hand.

Easily transfer stock between multiple different locations

For businesses managing multiple warehouses, branches or depots, an additional Stock Transfer module is also available. Working alongside OrderWise Stock Control, the Stock Transfer module enables businesses to easily and accurately move stock between multiple stock locations whilst retaining full stock visibility and true stock valuation figures.

By running the To Transfer report, staff using OrderWise will be able to quickly see what stock is needed, where and for when based on that stock location's current sales order demand. The required documentation can then be produced and goods can then be despatched like any regular sales order. Stock can then be booked in at the other end via the Goods In module or a staff member using the available functionality on their OrderWise Mobile WMS Device.
